## GEEK DESIGNS NEW L<sup>A</sup>T<sub>E</sub>X PACKAGE

By MATTHEW ALLEN

The package is basically a redefinition of the `\maketitle` command. The model was the New York Times—hopefully I haven't violated any copyright laws. I also had to redefine the plain pagestyle. It kept me busy for a few nights after work. The rest is packages other people have written.

The `multicol` package allows using multiple columns without starting a new page. Using floats is not possible in a columns environment, however with the `pinyinpar` package, I can set a picture inside a block of text—just like you one you see here. Isn't L<sup>A</sup>T<sub>E</sub>X cool? And now we're just filling more space, and yet more space.

	2		4			7	9	
6	5	4	7		9		3	
	8	7		2		4		5
8	7		5		1	6	2	4
	4		9	7	8		1	
1		5	6	4				7
		2		6	5	8	7	
5		3		9			4	1
		8			4	3		6

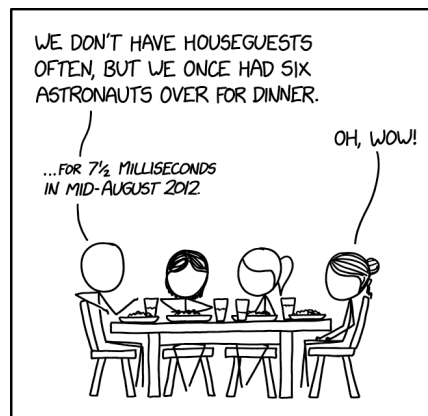

## Another Headline

This is just an example to fill up some space, but as long as I have your attention, I'll give some newspaper advice.

I suppose we could also show how an equation is type set:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

and there you have it.

IF YOU SPEND ENOUGH TIME LOOKING AT ORBITAL RECORDS AND PROPERTY LINES, YOU CAN MAKE THIS CLAIM IN A LOT OF PLACES.
